Dear Teacher or Administrator,

Nowadays, modern world, everything involves in technology which results in computer science. Computer science cotributes a huge value to society, from agriculture, environment, astronomy, etc. With that, people concern about how to get computer science taught in school.

The value of a computer science major is $1.67 million lifetime earnings, and it can earn 40% more than the college average. Computing jobs are also #1 source of new wages in the US

It is essential and important that computer science should be implemented in our school curriculum. We need to have all students, male or female, diverse background to notice about it and get their attention about the program.

Will you help spread the information to students? All Students should be known about this program and have opportunity to join the program.

Students have a different background and some of them do not have a chance to approach computer science which is totally unfair for them. I would like to offer all students with

equality on approaching the computer science class. With that, I really want to teach to a diverse student body.

Sincerely,
Trung Tin Vo
